Tying a Rope Halter

Quick Release Halter

Knots- Alpine butterfly

- Puts a loop in rope at any spot
- Can be used to make pull handles on long rope
- Can be used on a tie line to separate animals

Twist 1

Twist 2

Fold top loop down

Push folded loop through
back of bottom loop
and pull through

Tom Fools knot

- Can be used to hobble animals legs together to move or manipulate

Tips

- Take vitals on the animal and call a veterinarian ASAP
- Medically check and stabilize animal before moving
- Designate a safety person
- Designate an animal handler to stay at the head and watch animal
- Collect contact information from the owner
- Write down animals permanent identification, color and markings, any behavior issues(kicker, cribber), and diet/medications
- Take photos
- Before any drag, be sure to protect the animals head by placing something, such as a foam pad, underneath it

Sideways Drag

Forward Assist

Backwards drag

Flipping a cast horse

Equine TPR

- Hydration- pinch test on shoulder with 1-2 second snap back
- Capillary Refill- thumb press on gums with 1-3 second color return
- Temperature- 99.5-101.5°F
- Pulse- 28-40 beats/min
- Respiration- 8-16 breaths/min

*General recommendations for standard adult horse

Tribute to Ralph

This large animal go bag is in tribute to a trusty bay horse named Ralph. Owned by LSART responder Sara, he made an amazing working partner. He helped train many responders by being such a bomb-proof horse that he didn't need sedation for training exercises, such as to be washed by groups of students in full body PPE. Having such a patient, calm, and collected live animal made hands on training stress free. He will be dearly missed and a horse that will never be forgotten. 2001-2015 Asleep on his hillside.

This reference guide is meant to be used by trained large animal rescue personnel only

Special thank you to Cindy Meeker
